Abhinav Prasad

Backend Software Engineer | Java/Spring Boot, SQL and AWS Delivery

Mumbai, Maharashtra, India | abhinavp0304@gmail.com | LinkedIn | GitHub

SUMMARY

Backend software engineer with professional depth in MySQL-backed business logic, SQL performance, database release automation and AWS-integrated delivery. Built Java/Spring Boot systems with REST APIs, PostgreSQL/PostGIS, Redis, security, real-time workflows and automated tests. Strongest in data-intensive systems where correctness, maintainability and safe change matter.

EXPERIENCE

Ostrum Tech Limited | UK aviation SaaS | Remote — **May 2024–Present**

Software Engineer — **September 2024–Present**

Software Engineer Intern — **May 2024–August 2024**

- Build and maintain MySQL stored procedures, functions, triggers, views, CTEs and JSON transformations for database-backed API behavior and operational workflows; design schemas and indexes, and use EXPLAIN-led analysis to support data integrity and query performance.
- Deliver version-controlled database migrations across development, test and production through dependency analysis, migration-history checks, stakeholder validation, deployment verification and rollback planning, with Flyway as supporting tooling.
- Independently built a Python/Tkinter release toolkit that standardized migration packaging, backups, reports and multi-schema bundles, reducing a typical preparation workflow from roughly two hours to twenty minutes.
- Support AWS-integrated database delivery and monitoring with RDS, Lambda, CodePipeline, CloudWatch, S3, Parameter Store, IAM and Performance Insights; build SQL-backed Power BI/DAX analysis for service performance and billing support.
- Clarify database-backed requirements and investigate state, audit and data-lifecycle behavior across application and data layers; use Claude Code and OpenAI Codex with targeted context, guardrails and human review for dependency analysis, SQL review, documentation, release verification and test design.

PROJECTS

Velo | White-Label Dispatch Platform — **Personal project**

- Built a substantial functional prototype with Java 22, Spring Boot 3, REST APIs, Spring Security/JWT, PostgreSQL/PostGIS, Redis, WebSockets/STOMP, Flyway and automated tests; implemented tenant-aware workflows, geospatial matching, concurrency-safe assignment and idempotent settlement.

Interactive Engineering Portfolio — **Personal project**

- Engineered a responsive Next.js 16 and React 19 portfolio with strict TypeScript, validated content contracts, accessible motion fallbacks, Playwright regression tests and production-oriented content, asset and dependency checks.

TECHNICAL SKILLS

Backend: Java 22, Spring Boot 3, Spring MVC, Spring Security, Spring Data JPA, REST APIs, OpenAPI, Maven

Databases: SQL, MySQL, PostgreSQL, PostGIS, stored procedures, functions, triggers, views, schema/index design, EXPLAIN, CTEs, JSON, Flyway

Systems & quality: Redis, WebSockets/STOMP, JWT, relational modeling, concurrency control, idempotency, automated testing

Cloud & delivery: AWS RDS, Lambda, CodePipeline, CloudWatch, S3, Parameter Store, IAM, Performance Insights, version-controlled migrations, multi-environment validation, rollback planning

Tooling: Python/Tkinter, Power BI, DAX, Claude Code, OpenAI Codex, TypeScript, React, Next.js, Playwright

EDUCATION

Vellore Institute of Technology | Bachelor's degree, Computer Science — **August 2020–August 2024**
